4. PARAMETROS RELEVANTES

4.1 Potencia P

$$P_1 = \frac{P_2}{\eta} \text{ [kW]}$$

$$P_{1n} \geq P_1 \cdot f_s \text{ [kW]}$$

P₁	Potencia de entrada
P₂	Potencia de salida
P_{1n}	Potencia nominal de entrada
f_s	Factor de servicio
η	Eficiencia

La eficiencia de los reductores BRC para 2 trenes de engranajes es del 96%.

4.2 Velocidad de giro n

n₁	Velocidad de entrada
n₂	Velocidad de salida

Se recomiendan velocidades de entrada inferiores a 1400rpm para optimizar las condiciones de trabajo del reductor y garantizar la vida de la unidad. mayores velocidades son permitidas, pero el pam M2 se vera reducido.

4.3 Reducción i

$$i = \frac{n_1}{n_2}$$

4.4 Par M

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \text{ [Nm]}$$

$$M_{2n} \geq M_2 \cdot f_s \text{ [Nm]}$$

M₂	Par de salida
M_{2n}	Par nominal de salida
P₁	Potencia de entrada
η	Eficiencia
f_s	Factor de servicio

4. RELEVANT PARAMETER

4.1 Power P

$$P_1 = \frac{P_2}{\eta} \text{ [kW]}$$

$$P_{1n} \geq P_1 \cdot f_s \text{ [kW]}$$

P₁	Input power
P₂	Output power
P_{1n}	Rated input motor power
f_s	Service factor
η	Transmission efficiency

BRC Series helical gear units has **2 stage** and the efficiency is about **96%**.

4.2 Rotation speed n

n₁	Gear units input speed
n₂	Gear units output speed

If driven by the external gearing, 1400r/min or lower rotation speed is suggested so as to optimize the working conditions and prolong the service life. Higher input rotation speed is permitted, but in this situation, the rated torque M₂ will be reduced.

4.3 Transmission ratio i

$$i = \frac{n_1}{n_2}$$

4.4 Torque M

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \text{ [Nm]}$$

$$M_{2n} \geq M_2 \cdot f_s \text{ [Nm]}$$

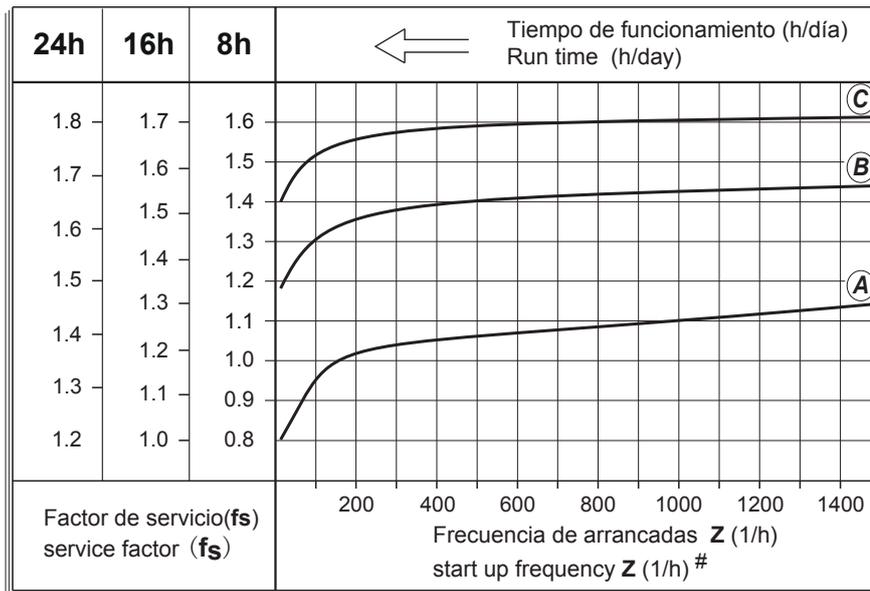

M₂	Output torque
M_{2n}	Rated output torque
P₁	Input power
η	Transmission efficiency
f_s	Service factor

4.5 Facto de servicio fs

El efecto de la máquina accionada por el engranaje se tiene en cuenta a un nivel suficiente de precisión utilizando el factor de servicio fs. El factor de servicio se determinará en función del tiempo de funcionamiento diario y la frecuencia de arranque Z. Tres clasificaciones de carga se consideran en función del factor masa de aceleración. Puede ver el factor de servicio aplicable a su máquina en la figura siguiente. El factor de servicio seleccionado utilizando este diagrama debe ser menor que o igual al factor de servicio según se indica en la tabla de parámetros de rendimiento.

4.5 Service factor fs

The effect of the driven machine on the gear unit is taken into account to a sufficient level of accuracy using the service factor fs. The service factor is determined according to the daily operating time and the starting frequency Z. Three load classifications are considered depending on the mass acceleration factor. You can read off the service factor applicable to your application in following Figure. The service factor selected using this diagram must be less than or equal to the service factor as given in the performance parameter table.

Frecuencia de arrancadas Z: Los ciclos incluyen el arranque y la parada así como aumentos y disminución de la velocidad.

Starting frequency Z: The cycles include all starting and braking procedures as well as change overs from low to high speed.

4.5.1 Clasificación de cargas

- Ⓐ carga uniforme, Factor de aceleración permitido ≤0.2
- Ⓑ Carga moderada, Factor de aceleración permitido ≤3
- Ⓒ Carga impulsiva, Factor de aceleración permitido ≤10

4.5.1 Load classifications

- Ⓐ Uniformshock load, permitted mass acceleration factor ≤0.2
- Ⓑ Moderate shock load, permitted mass acceleration factor ≤3
- Ⓒ Heavy shock load, permitted mass acceleration factor ≤10

Load classifications see the addendum.

4.5.2 Factor de aceleración

El factor de aceleración es calculado como sigue:

$$fa = \frac{Jc}{Jm}$$

4.5.2 Mass acceleration factor

The mass acceleration factor is calculated as follows:

$$fa = \frac{Jc}{Jm}$$

fa Factor de aceleración
Jc Momentos de inercia externos [kgm²]
Jm Momentos de inercia en el motor [kgm²]

Si el factor de aceleración es **fa** > 10, por favor contactar con nuestro servicio técnico

Para asegurar el servicio del reductor, el use del factor **f_s** Seleccionado en el catálogo, debe ser igual o superior que el calculado en **f_s** .

4.6 Cargas radiales Fr

Al determinar las cargas radiales resultantes, debe ser considerado el tipo de elemento de transmisión montado en el eje de salida. Ver la siguiente tabla para obtener el factor fz de cálculo de algunos elementos.

Elemento de transmisión Transmission element	Factor según elemento Fz Transmission element factor Fz	Comentarios Comments
Engranajes / Gears	1.00	≥ 17 / teeth
	1.15	< 17 / teeth
Piñón de cadena / Chain sprockets	1.00	≥ 20 / teeth
	1.25	< 20 / teeth
	1.40	< 13 / teeth
Poleas tipo V / Narrow V-belt pulleys	1.75	Influencia de la tensión Influence of the tensile force
Poleas planas / Flat belt pulleys	2.50	Influencia de la tensión Influence of the tensile force
Poleas dentadas / Toothed belt pulleys	2.50	Influencia de la tensión Influence of the tensile force

Las cargas ejercidas sobre el eje son calculadas de la siguiente forma:

$$F_r = \frac{M \cdot 2000 \cdot f_z}{d_0} \text{ [N]}$$

Fr Carga radial resultante [N]
M Par en el eje [Nm]
d₀ Diámetro del elemento de transmisión montado en el eje en [mm]
f_z Factor del elemento de transmisión

La carga radial permitida en el eje es calculado con la siguiente formula:

$$F_{xL} \leq \frac{Fr_2 \cdot a}{(b+x)} \text{ [N]}$$

Fr₂ Carga radial permitida (x = L/2) para montaje de reductores con patas según tablas de selección en [N]
a, b constantes según table

fa Mass acceleration factor
Jc All external mass moments of inertia [kgm²]
Jm Mass moment of inertia on the motor end [kgm²]

If mass acceleration factors **fa** > 10, please call our Technical Service.

To keep the service-life of gear units, the use factor **f_s** selected from the catalogue must be equal or slightly higher than the calculated use factor **f_s** .

4.6 Radial loads Fr

When determining the resulting radial loads, the type of transmission elements, mounted on the shaft end must be considered. Various transmission elements are corresponding with following transmission element factors fz:

The overhung loads exerted on the motor or gear shaft is then calculated as follows:

$$F_r = \frac{M \cdot 2000 \cdot f_z}{d_0} \text{ [N]}$$

Fr Resulting radial load [N]
M Torque on the shaft [Nm]
d₀ Mean diameter of the mounted transmission element in [mm]
f_z Transmission element factor

The allowed radial load force on the shaft is calculated with the following formula:

$$F_{xL} \leq \frac{Fr_2 \cdot a}{(b+x)} \text{ [N]}$$

Fr₂ Permitted overhung load (x = L/2) for foot-mounted gear units according to the selection tables in [N]
a, b Constant as per table.

PARAMETROS RELEVANTES *RELEVANT PARAMETER*

x Distancia desde el punto de apoyo hasta el punto de aplicación de la carga en mm

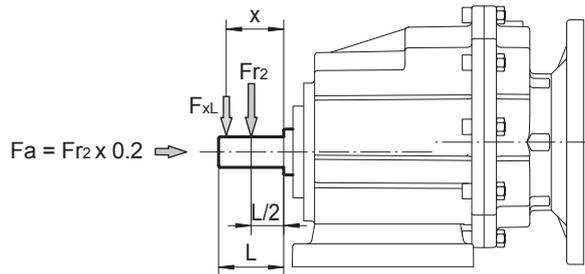

Los valores de a , b , Fr2 son dados en las siguientes tablas:

x Distance from the shaft shoulder to the force application point in (mm)

The values of a , b , Fr2 are given in the following tables:

	BRC01	BRC02	BRC03	BRC04
a	103	116.5	130	147
b	83	91.5	100	112

5. EJEMPLO DE SELECCION / SELECTION EXAMPLE

5.1 Reductor

Ejemplo: El par necesario en la maquina es de 400Nm. Trabaja durante 6 horas al día con carga uniforme. 400 arrancadas por hora. brida de salida d.200mm velocidad $n_2=30$ rpm.

Ver tablas, $f_s=1.05$

$$M_{2n} \geq M_2 \cdot f_s = 400 \times 1.05 = 420[\text{Nm}]$$

$$i = \frac{n_1}{n_2} = \frac{1400}{30} = 46.67$$

Reductor seleccionado:

BRCF04 II - P90B5 - 44.18

5.2 Motoreductor

Ejemplo Potencia requerida por la maquina 1KW. Funcionamiento 8 horas al día con carga moderada. trabajo en continuo, montaje patas. Velocidad $n_2=95$ rpm

Ver tablas, $f_s=1.35$

$$i = \frac{n_1}{n_2} = \frac{1400}{95} = 14.74$$

$$P_{1n} \geq P_1 \cdot f_s = \frac{P_2}{\eta} \cdot f_s = \frac{1}{0.96} \times 1.35 = 1.41[\text{kW}]$$

Reductor seleccionado:

BRC02 - P90B5 - 14.81 - 1.5-4 - M6

5.1 Gear units

Example: The required torque on driven machine is 400Nm, works for 6 hours per day, Uniform shock load, start-up frequency is 400 times per hour, $\varnothing 200$ mm output flange-mounted, $n_2=30$ r/min.

see tables, $f_s=1.05$

$$M_{2n} \geq M_2 \cdot f_s = 400 \times 1.05 = 420[\text{Nm}]$$

$$i = \frac{n_1}{n_2} = \frac{1400}{30} = 46.67$$

Choose type:

BRCF04 II - P90B5 - 44.18

5.2 Gear motor

Example: The required power on driven machine 1kW, works for 8 hours per day, moderate shock load, start-up continuously, M6 foot-mounted, $n_2=95$ r/min.

see tables, $f_s=1.35$

$$i = \frac{n_1}{n_2} = \frac{1400}{95} = 14.74$$

$$P_{1n} \geq P_1 \cdot f_s = \frac{P_2}{\eta} \cdot f_s = \frac{1}{0.96} \times 1.35 = 1.41[\text{kW}]$$

Choose type:

BRC02 - P90B5 - 14.81 - 1.5-4 - M6

11. INSTALACIÓN

11.1 Preparación antes de la instalación

- 1). Comprovar que los datos de la placa son compatible con el voltaje.
- 2). Para reductores estándar, la temperatura ambiente a de estar en concordancia con el lubricante seleccionado.
- 3). el reductor no bedef ser instalado en ambientes con aceite, gas, vapores, acidos, radiación etc..
- 4). El eje de salida y la brida deben estar limpias para evitar la corrosión. evitar el contacto de agentes limpiadores con los retenes para evitar daños y futuras perdidas de aceite.
- 5). La estructura de soporte debe estar nivelada, sin vibraciones y debe ser suficientemente rigida.

11.2 La instalación del reductor

- 1). Nunca montar poleas, acoplamientos, piñones etc. forzando su entrada en el eje golpeando con un martillo, ya que esto puede dañar los rodamientos y la caja del reductor
- 2). Antes del arranque, compruebe que el nivel de aceite se corresponde con la posición de montaje. Compruebe que los tapones de llenado y nivel son accesibles.

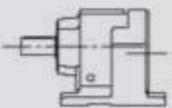

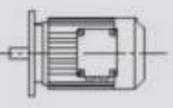

11. INSTALLATION METHODS

11.1 Preparation before the installation

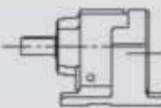

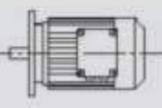

- 1). Check if the data on the nameplates of the gearmotor matches the voltage supply system.
- 2). For standard gear unit, the ambient temperature must be in accordance with the corresponding lubricant table.
- 3). The drive must not be assembled in conditions such as oil, gas, vapors, acids, radiation and so on.
- 4). Output shaft and flange surfaces must thoroughly cleaned to ensure they are free of anti-corrosion agents, contamination or similar. Use a commercially available solvent. Do not let the solvent come into contact with the sealing lip of the oil seals, or will damage the material!
- 5). The supporting structure must have the following characteristics: level, vibration damping and torsionally rigid.

11.2 The installation of the gear units

- 1). Never drive belt pulleys, couplings, pinions, etc. onto the shaft end by hitting them with a hammer. This will damage the bearing, housing and the shaft.
- 2). Prior to startup, check that if the oil level is as specified for the mounting position. if the oil checking and drain screw and the breather valves are free accessible.

1) Dimension P/2 may protrude past foot mounting surface, please check.

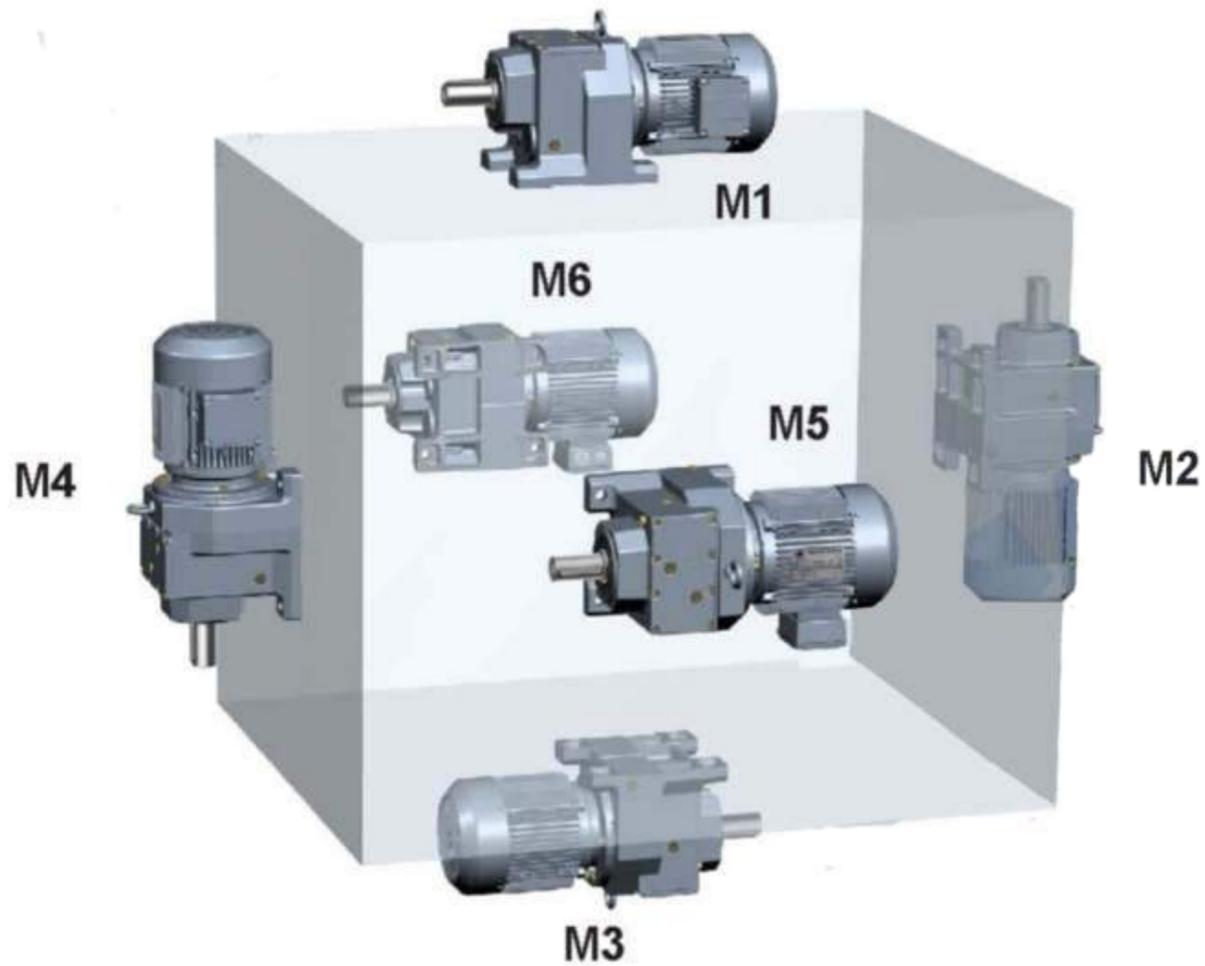

2) not with AM112.

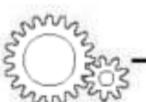

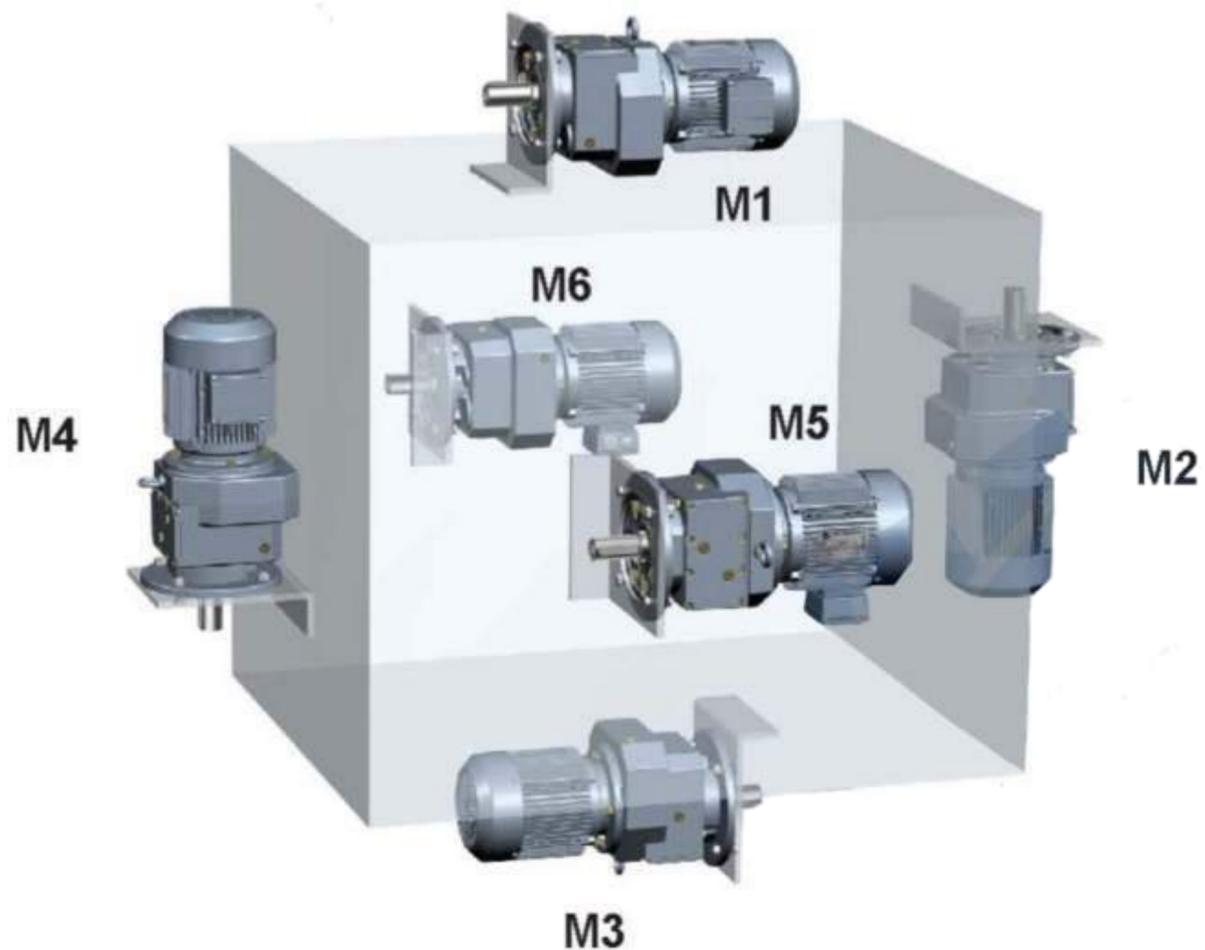

8. MOUNTING POSITIONS

8.1 Mounting position designation

Differentiates between six mounting positions M1 ... M6 for gear units. The following figure shows the spatial orientation of the gearmotor in mounting positions M1 ... M6.

TR..

TR../TR..F:

Gear units	Fill quantity in liters					
	M1**	M2**	M3	M4	M5	M6
TR78	1.20/3.00	3.80/4.10	3.60	4.10	2.50	3.40
TR88	2.30/6.0	6.7/8.2	7.20	7.70	6.30	6.50
TR98	4.60/9.8	11.7/14.0	11.70	13.40	11.30	11.70
TRF78	1.20/2.60	3.80/4.10	3.30	4.10	2.40	3.00
TRF88	2.40/6.0	6.8/7.9	7.10	7.70	6.30	6.40
TRF98	5.1/10.2	11.9/14.0	11.20	14.00	11.20	11.80

** The large gear unit of multi-stage gear units must be filled with the larger oil volume.
